DSU07315: Basics of Big Data

Tutorial 1: Big Data Concepts

Questions for discussion(5 students @ 5marks)

1. In a big data context, why data is called big data?
2. Big data is being characterized by 5Vs: Read the following statements, then from each statement attach the corresponding V.
 - The vast amounts of data that are collected from multiple heterogeneous sources.
 - The various formats of structured, semi-structured and unstructured data, from social media, IoT devices, database tables, web applications, streaming services, machinery, business software and other sources.
 - The potential business value of the collected data.
 - The ever-increasing rate at which data is being generated on all fronts in all industries.
 - The degree of accuracy of collected data, which can vary significantly from one source to the next.
3. In big data, data can be classified as structured, semi-structured, and unstructured data. Briefly explain why data in a data lake can not be taken as structured data?
4. Do you think data lake can be categorized as semi-structured or unstructured data. Explain your answer.
